### The Secret World of Babies

This delightful and informative article shares insights from studies being conducted at the Babylab in London. Researchers are gathering information from MRI scans of sleeping babies, sophisticated eye-trackers, EEGs that measure electrical activity in the brain, and even heart-rate monitors. One common goal is to understand what typical development looks like, and then investigate why and how some babies develop differently. Learn what they've discovered at

### COVID-19 Resources for Families

With disruptions of the family routines and limited physical activities, children may feel overwhelmed, upset, and stressed during this challenging time. Check out a curated set of resources, some of which are available in Spanish and other languages, to help families with young children with and without disabilities talk about the pandemic and navigate changes to their everyday routines and activities. <https://stemie.fpg.unc.edu/covid-19-resources-families-help-children-understand-covid-19>

### The Brain Architects COVID-19 Special Edition: A Different World

In this first episode from a special COVID-19 series of *The Brain Architects* podcast, Center Director Jack P. Shonkoff, M.D., discusses the COVID-19 pandemic in the context of early childhood development. He offers advice to help ensure that adults and the children they care for don't experience the long-term effects of stress, and explains how society can work together to continue to support healthy development. Listen to or download the podcase at
